

Defibrillation with AED

High performance to satisfy your needs

In 1966, Nihon Kohden manufactured Japan's first direct current defibrillator. From our long experience in this field, we provide reliable solutions for all defibrillator needs.

ActiBiphasic

TEC-5500K series provides low energy biphasic waveform defibrillation. Biphasic waveform defibrillation requires lower energy than conventional monophasic defibrillation and causes less damage to myocardium. Biphasic technology demonstrates superior results to save the patient from sudden cardiac arrest. Nihon Kohden's unique ActiBiphasic* technology provides an improvement over most conventional biphasic circuits by employing an original T-circuit. In conventional biphasic circuits, when impedance is high, the pulse width becomes wider which reduces the efficiency of defibrillation. Nihon Kohden's T-circuit actively controls the shape of the second phase waveform to maintain constant pulse width. *Patent pending

AED with voice prompt

AED (Automated External Defibrillation) is available with disposable pad adaptor cable (option) and disposable pads. When shockable rhythm is detected, TEC-5500K automatically starts charging for hands-free defibrillation. CPR timing sound is also provided. Voice prompt is available as standard provision for less frequent users.

SpO₂/CO₂ monitoring (option)

You can easily add measuring parameters of SpO₂ and CO₂ with an optional unit. 2 waveforms can be displayed simultaneously on a crisp TFT color LCD screen.

Major options

For full list of options and consumables, see the Technical Data separately available

Cart, KD-028A
Tray for cart, DI-001A

DSI interface unit, QI-552V, for SpO₂ and CO₂ (photo)
DSI/AUX out interface unit, QI-553V, for SpO₂ or CO₂ and AUX

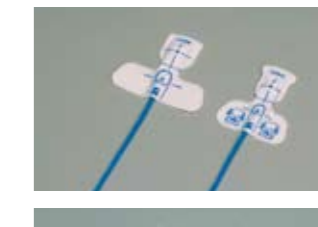

SpO₂ adapter, Y095A JL-550T2
Reusable SpO₂ probe BluPRO, P225F TL-201T

Defibrillator analyzer, AX-103VK

CO₂ sensor kit, P906 TG-901T3

Airway adapter, R801 YG-101T

Battery charger, SB-551V

Internal paddle electrode ND-762V/763V/764V/765V/766V/767V
Available in six sizes (25, 35, 45, 55, 65, 75 mm dia)

Disposable SpO₂ probe BluPRO, P203A TL-271T, P203B TL-272T, P203C TL-273T, P203D TL-274T

Rechargeable battery, X065 NKB-301V

Disposable pads Adult H315 P-510 Child H316 P-512
Disposable pad adaptor cable JC-765V

CO₂ sensor kit, P908 TG-921T3

Disposable naso-oral adapter, for non-intubated, V922 YG-121T V923 YG-122T
Airway adapter for P908, for intubated R804 YG-111T

Gel holder kit, YZ-025H0

Pediatric electrode assy, ND-612V, 44 mm dia

SD card, Y154 QM-064D
Defibrillation report viewer software, QP-551VK

cardiolife — Fast and Reliable Defibrillation with ActiBiphasic technology

No waiting time for defibrillation

- **Fast charging**
3 seconds for 200J, 5 seconds for 270J charging in AC operation or fully charged new battery.

- **Quick recovery**
3 seconds ECG recovery shows the defibrillation result quickly.

Powerful battery operation

High capacity

A fully charged new battery provides at least 70 discharges at 270J or 150 minutes continuous monitoring.*

(*see Technical Data for specific conditions)

Short charging time

Approx. 2 hours (maximum 3 hours) to fully charge with AC cord connected and power off.

Airway management with CO₂ mainstream method on capONE (option)

cap-ONE, the world's first mainstream CO₂ sensor, can measure EtCO₂ of non-intubated patients. It can also measure intubated patients just by changing the airway adapter. No complicated setting or warm-up time is required so you can obtain CO₂ quickly and accurately. A CO₂ sensor kit, TG-901T3, is also available for intubated patients.

Compact and lightweight

Easy to carry in an emergency

Voice recorder

Voice and ECG waveform at the defibrillation can be saved in the optional SD memory card.

You can replay on PC or TEC-5500K series defibrillator what happened and what was done.

User-oriented unique designs

Inclined design

- The paddle holder is slightly inclined for easier placing and removing of the paddles.
- Screen and operation panels are also inclined for easier viewing from a standing position.

TEC-5521K (with optional unit)

Practical external paddles

- The paddles include child electrodes underneath the adult electrodes.
- Electrode-skin contact quality is indicated by easy to see color-coded indicators.

Convenient paddle rest

Convenient paddle rests for temporary storage of prepped external paddles.

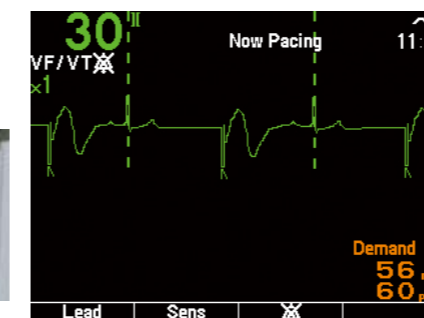

Easy paddle change

You can change paddles easily with one connector.

Noninvasive pacing (TEC-5531K)

External pacing capabilities are built-in. Pacing is very effective for recovery from bradycardia after defibrillation.

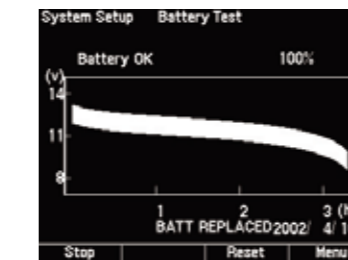

Reliable and stable operation

Protection from sudden capacitor failure

The high voltage capacitor is divided into thousands of individual cells to prevent sudden, total failure of the capacitor. If any part fails, the remaining cells can still provide shock. The high-voltage capacitor is automatically tested by a capacitor test program which measures the capacitance by charging and discharging.

Reliable battery operation

An optional NiMH (nickel metal hydride) rechargeable battery provides reliable battery operation. A new real load testing method indicates the actual remaining charge so you can know approximately how many defibrillations are available. Battery performance test is done by simulating actual charging and discharging

to accurately test the quality of the rechargeable battery.

Built-in recorder

2-channel built in thermal array recorder records various defibrillation information.

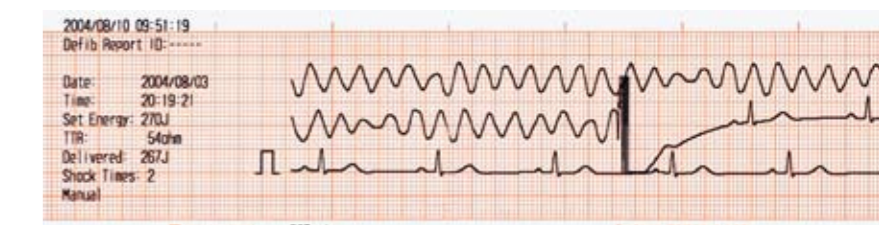

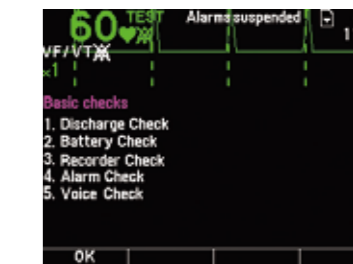

Review and reporting

Saved data can be transferred to a PC using an optional SD memory card, and reviewed on the PC with optional Defibrillation Report Viewer software, QP-765VK/551VK. Recorded voice can be replayed on the PC with QP-551VK.

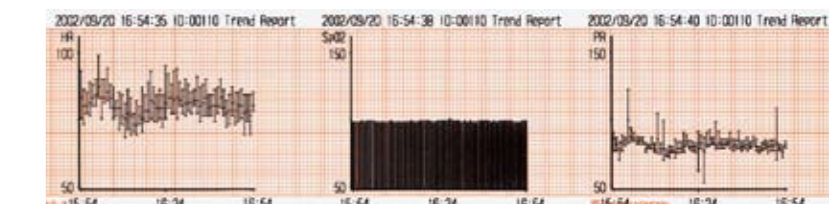

Easy routine checking

You can easily check the instrument at any time.
